In AutoCAD 2010 and later, there is also a "Global" preference area which contains common preferences that are used by all workbenches. Math features AutoCAD provides the ability to make mathematical calculations. Common math functions such as area, circumference, and perimeter are available within the model environment. A number of other math functions such as root, modulus, and logarithms are available by selecting the "Math" button on the "Tools" menu. Other math functions such as trigonometric and hyperbolic functions are available by using the "Math" button on the "Operators" menu. Database features AutoCAD has a database of objects which can be stored as you draw. You can draw parts, families, blocks, surfaces, linetypes and create layers, which are objects stored in a database.
